## Indices

We know that the result of a repeated addition can be held by multiplication e.g.

$$
\begin{aligned}
& 4+4+4+4+4=5(4)=20 \\
& a+a+a+a+a=5(a)=5 a
\end{aligned}
$$

## Indices

We know that the result of a repeated addition can be held by multiplication e.g.

$$
\begin{aligned}
& 4+4+4+4+4=5(4)=20 \\
& a+a+a+a+a=5(a)=5 a
\end{aligned}
$$

## Indices

Now,

$$
\begin{aligned}
& 4 \times 4 \times 4 \times 4 \times 4=4^{5}, \\
& a \times a \times a \times a \times a=a^{5} .
\end{aligned}
$$

It may be noticed that in the first case 4 is multiplied 5 times and in the second case'a' is multiplied 5 times.

## Indices

Now,

$$
\begin{aligned}
& 4 \times 4 \times 4 \times 4 \times 4=4^{5}, \\
& a \times a \times a \times a \times a=a^{5} .
\end{aligned}
$$

It may be noticed that in the first case 4 is multiplied 5 times and in the second case'a' is multiplied 5 times. In all such cases a factor which multiplies is called the "base" and the number of times it is multiplied is called the "power" or the "index". Therefore, " 4 " and "a" are the bases and " 5 " is the index for both.

## Indices

Now,

$$
\begin{aligned}
& 4 \times 4 \times 4 \times 4 \times 4=4^{5}, \\
& a \times a \times a \times a \times a=a^{5} .
\end{aligned}
$$

It may be noticed that in the first case 4 is multiplied 5 times and in the second case'a' is multiplied 5 times. In all such cases a factor which multiplies is called the "base" and the number of times it is multiplied is called the "power" or the "index". Therefore, " 4 " and "a" are the bases and " 5 " is the index for both. Any base raised to the power zero is deffied to be 1 ; i.e. $a^{0}=1$. We also define $\sqrt[r]{a}=a^{1} / r$

## Indices

Now,

$$
\begin{aligned}
& 4 \times 4 \times 4 \times 4 \times 4=4^{5}, \\
& a \times a \times a \times a \times a=a^{5} .
\end{aligned}
$$

It may be noticed that in the first case 4 is multiplied 5 times and in the second case'a' is multiplied 5 times. In all such cases a factor which multiplies is called the "base" and the number of times it is multiplied is called the "power" or the "index". Therefore, " 4 " and "a" are the bases and " 5 " is the index for both. Any base raised to the power zero is deffied to be 1 ; i.e. $a^{o}=1$. We also define $\sqrt[r]{a}=a^{1} / r$

## Indices

If $n$ is a positive integer, and 'a' is a real number, i.e. $n \in N$ and $a \in R$ (where $N$ is the set of positive integers and $R$ is the set of real numbers), 'a' is used to denote the continued product of $n$ factors each equal to 'a' as shown below:

$$
a^{n}=a \times a \times a \ldots, \text { to } n \text { factors. }
$$

## Indices

If $n$ is a positive integer, and 'a' is a real number, i.e. $n \in N$ and $a \in R$ (where $N$ is the set of positive integers and $R$ is the set of real numbers), 'a' is used to denote the continued product of $n$ factors each equal to 'a' as shown below:

$$
a^{n}=a \times a \times a \ldots, \text { to } n \text { factors }
$$

Here $a^{n}$ is a power of a whose base is a and the index or power is $n^{\prime \prime}$

## Indices

If $n$ is a positive integer, and 'a' is a real number, i.e. $n \in N$ and $a \in R$ (where $N$ is the set of positive integers and $R$ is the set of real numbers), 'a' is used to denote the continued product of $n$ factors each equal to 'a' as shown below:

$$
a^{n}=a \times a \times a \ldots, \text { to } n \text { factors }
$$

Here $a^{n}$ is a power of a whose base is a and the index or power is $n^{"}$ For example, in
$3 \times 3 \times 3 \times 3=3^{4}, 3$ is base and 4 is index or power.

## Indices

If $n$ is a positive integer, and 'a' is a real number, i.e. $n \in N$ and $a \in R$ (where $N$ is the set of positive integers and $R$ is the set of real numbers), 'a' is used to denote the continued product of $n$ factors each equal to 'a' as shown below:

$$
a^{n}=a \times a \times a \ldots, \text { to } n \text { factors. }
$$

Here $a^{n}$ is a power of a whose base is a and the index or power is $n$ " For example, in
$3 \times 3 \times 3 \times 3=3^{4}, 3$ is base and 4 is index or power.

## Indices

# Law 1: $a^{m} \times a^{n}=a^{m+n}$, when $m$ and $n$ are positive integers; 

## Law 2: $a^{m} / a^{n}=a^{m-n}$, when $m$ and $n$ are positive integers and $m>n$.

## Indices

Law 1: $a^{m} \times a^{n}=a^{m+n}$, when $m$ and $n$ are positive integers;
Law 2: $a^{m} / a^{n}=a^{m-n}$, when $m$ and $n$ are positive integers and $m>n$.
Law 3: $\left(a^{m}\right)^{n}=a^{m n}$. where $m$ and $n$ are positive integers

## Indices

# Law 1: $a^{m} \times a^{n}=a^{m+n}$, when $m$ and $n$ are positive integers; 

Law 2: $a^{m} / a^{n}=a^{m-n}$, when $m$ and $n$ are positive integers and $m>n$.
Law 3: $\left(a^{m}\right)^{n}=a^{m n}$. where $m$ and $n$ are positive integers
Law 4: $(a b)^{n}=a^{n} \cdot b^{n}$ when $n$ can take all of the values.

## Indices

Law 1: $a^{m} \times a^{n}=a^{m+n}$, when $m$ and $n$ are positive integers;
Law 2: $a^{m} / a^{n}=a^{m-n}$, when $m$ and $n$ are positive integers and $m>n$.
Law 3: $\left(a^{m}\right)^{n}=a^{m n}$. where $m$ and $n$ are positive integers
Law 4: $(a b)^{n}=a^{n} \cdot b^{n}$ when $n$ can take all of the values.

## Indices

Law 1: $a^{m} \times a^{n}=a^{m+n}$, when $m$ and $n$ are positive integers;
Law 2: $a^{m} / a^{n}=a^{m-n}$, when $m$ and $n$ are positive integers and $m>n$.
Law 3: $\left(a^{m}\right)^{n}=a^{m n}$. where $m$ and $n$ are positive integers
Law 4: $(a b)^{n}=a^{n} \cdot b^{n}$ when $n$ can take all of the values.

## Summary

## 2. $a^{m} \times a^{n}=a^{m+n}$ (base must be same)

 Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
## Summary

( $a^{m} \times a^{n}=a^{m+n}$ (base must be same)
Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
(2) $a^{m} \times a^{n}=a^{m-n}$

## Summary

## Summary

( $a^{m} \times a^{n}=a^{m+n}$ (base must be same)
Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$
(2. $\left(a^{m}\right)^{n}=a^{m n}$

## Summary

$$
\begin{aligned}
& a^{m} \times a^{n}=a^{m+n}(\text { base must be same }) \\
& \text { Ex. }^{3} \times 2^{2}=2^{3+2}=2^{5} \\
& a^{m} \times a^{n}=a^{m-n} \\
& \text { Ex. }^{5} \times 2^{3}=2^{5-3}=2^{2} \\
& \left(a^{m}\right)^{n}=a^{m n} \\
& \text { Ex. }(2)=2^{5 \times 2}=2^{10}
\end{aligned}
$$

## Summary

- $a^{m} \times a^{n}=a^{m+n}$ (base must be same)

Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$
( $\left(a^{m}\right)^{n}=a^{m n}$
Ex. (2) $=2^{5 \times 2}=2^{10}$
(2) $a^{0}=1$

## Summary

$a^{m} \times a^{n}=a^{m+n}$ (base must be same)
Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$
( $\left(a^{m}\right)^{n}=a^{m n}$
Ex. (2) $=2^{5 \times 2}=2^{10}$
$a^{o}=1$
Ex. $2^{0}=1,3^{0}=1$

## Summary

- $a^{m} \times a^{n}=a^{m+n}$ (base must be same)

Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$

- $\left(a^{m}\right)^{n}=a^{m n}$

Ex. (2) $=2^{5 \times 2}=2^{10}$
$a^{o}=1$
Ex. $2^{0}=1,3^{0}=1$
(2) $a^{-m}=1 / a^{m}$ and $I / a=a^{m}$

## Summary

$a^{m} \times a^{n}=a^{m+n}$ (base must be same)
Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$
( $\left(a^{m}\right)^{n}=a^{m n}$
Ex. (2) $=2^{5 \times 2}=2^{10}$
$a^{o}=1$
Ex. $2^{0}=1,3^{0}=1$
$a^{-m}=1 / a^{m}$ and $I / a=a^{m}$
Ex. $2^{-3}=1 / 2^{3}$ and $1 / 2^{-5}=2^{5}$

## Summary

( $a^{m} \times a^{n}=a^{m+n}$ (base must be same)
Ex. $2^{3} \times 2^{2}=2^{3+2}=2^{5}$
$a^{m} \times a^{n}=a^{m-n}$
Ex. $2^{5} \times 2^{3}=2^{5-3}=2^{2}$

- $\left(a^{m}\right)^{n}=a^{m n}$

Ex. (2) $=2^{5 \times 2}=2^{10}$
$a^{o}=1$
Ex. $2^{0}=1,3^{0}=1$
$a^{-m}=1 / a^{m}$ and $\mathrm{I} / a=a^{m}$
Ex. $2^{-3}=1 / 2^{3}$ and $1 / 2^{-5}=2^{5}$

## Summary

3. If $a^{x}=a^{y}$, then $x=y$ If $x^{a}=y^{a}$, then $x=y$

## Summary

If $a^{x}=a^{y}$, then $x=y$
If $x^{a}=y^{a}$, then $x=y$
$\sqrt[m]{a}=a^{1 / m}, \sqrt{X}=x^{1 / 2}, \sqrt{4}=\left(2^{2}\right)^{1 / 2}=$ $2^{1 / 2 \times 2}=2$

## Summary

2. If $a^{x}=a^{y}$, then $x=y$

If $x^{a}=y^{a}$, then $x=y$
$\sqrt[m]{a}=a^{1 / m}, \sqrt{X}=x^{1 / 2}, \sqrt{4}=\left(2^{2}\right)^{1 / 2}=$
$2^{1 / 2 \times 2}=2$
Ex. $\sqrt[3]{8}=8^{1 / 3}=\left(2^{3}\right)^{1 / 3}=2^{3 \times 1 / 3=2}$

## Summary

2. If $a^{x}=a^{y}$, then $x=y$

If $x^{a}=y^{a}$, then $x=y$
$\sqrt[m]{a}=a^{1 / m}, \sqrt{X}=x^{1 / 2}, \sqrt{4}=\left(2^{2}\right)^{1 / 2}=$
$2^{1 / 2 \times 2}=2$
Ex. $\sqrt[3]{8}=8^{1 / 3}=\left(2^{3}\right)^{1 / 3}=2^{3 \times 1 / 3_{=2}}$

## Question

$4 x^{-1 / 4}$ is expressed as

## Question

$4 x^{-1 / 4}$ is expressed as

## Options

$$
\begin{array}{llll}
\text { (a) }-4 x^{1 / 4} & \text { (b) } x^{-1} & \text { (c) } 4 / x^{1 / 4} & \text { (d) none of }
\end{array}
$$ these

## Question

$4 x^{-1 / 4}$ is expressed as

## Options

(a) $-4 x^{1 / 4}$
(b) $x^{-1}$
(c) $4 / x^{1 / 4}$
(d) none of these

## Question

The value of $8^{1 / 3}$ is

## Question

The value of $8^{1 / 3}$ is

## Options

$\begin{array}{llll}\text { (a) } 3 \sqrt{2} & \text { (b) } 4 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question

The value of $8^{1 / 3}$ is

## Options

## $\begin{array}{llll}\text { (a) } 3 \sqrt{2} & \text { (b) } 4 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question <br> The value of $2 \times(32)^{1 / 5}$ is

## Question

The value of $2 \times(32)^{1 / 5}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } 10 & \text { (c) } 4 & \text { (d) none of these }\end{array}$

## Question

The value of $2 \times(32)^{1 / 5}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } 10 & \text { (c) } 4 & \text { (d) none of these }\end{array}$

## Question <br> The value of $4 /(32)^{1 / 5}$ is

## Question

The value of $4 /(32)^{1 / 5}$ is

## Options

$\begin{array}{llll}\text { (a) } 8 & \text { (b) } 2 & \text { (c) } 4 & \text { (d) none of these }\end{array}$

## Question

The value of $4 /(32)^{1 / 5}$ is

## Options

$\begin{array}{llll}\text { (a) } 8 & \text { (b) } 2 & \text { (c) } 4 & \text { (d) none of these }\end{array}$

## Question <br> The value of $(8 / 27)^{1 / 3}$ is

## Question

The value of $(8 / 27)^{1 / 3}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 / 3 & \text { (b) } 3 / 2 & \text { (c) } 2 / 9 & \text { (d) none of these }\end{array}$

## Question

The value of $(8 / 27)^{1 / 3}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 / 3 & \text { (b) } 3 / 2 & \text { (c) } 2 / 9 & \text { (d) none of these }\end{array}$

## Question

The value of $2(256)^{-1 / 8}$ is

## Question

The value of $2(256)^{-1 / 8}$ is

## Options

$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 2 & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question

The value of $2(256)^{-1 / 8}$ is

## Options

$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 2 & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question <br> $2^{1 / 2} .4^{3 / 4}$ is equal to

## Question

$2^{1 / 2} .4^{3 / 4}$ is equal to

## Options

(a) a fraction (b) a positive integer (c) a negative integer (d) none of these

## Question

$2^{1 / 2} .4^{3 / 4}$ is equal to

## Options

(a) a fraction (b) a positive integer (c) a negative integer (d) none of these

## Question <br> $\left(\frac{81 x^{4}}{y^{-8}}\right)^{\frac{1}{4}}$ has simplified value equal to

## Question

$\left(\frac{81 x^{4}}{y^{-8}}\right)^{\frac{1}{4}}$ has simplified value equal to

## Options

$\begin{array}{llll}\text { (a) } x y^{2} & \text { (b) } x^{2} y & \text { (c) } 9 x y^{2} & \text { (d) none of these }\end{array}$

## Question

$\left(\frac{81 x^{4}}{y^{-8}}\right)^{\frac{1}{4}}$ has simplified value equal to

## Options

$\begin{array}{llll}\text { (a) } x y^{2} & \text { (b) } x^{2} y & \text { (c) } 9 x y^{2} & \text { (d) none of these }\end{array}$

## Question

$x^{a-b} \times x^{b-c} \times x^{c-a}$ is equal to

## Question

$x^{a-b} \times x^{b-c} \times x^{c-a}$ is equal to

## Options

$\begin{array}{llll}\text { (a) } x & \text { (b) } 1 & \text { (c) } 0 & \text { (d) none of these }\end{array}$

## Question

$x^{a-b} \times x^{b-c} \times x^{c-a}$ is equal to

## Options

$\begin{array}{llll}\text { (a) } x & \text { (b) } 1 & \text { (c) } 0 & \text { (d) none of these }\end{array}$

## Question

The value of $\left(\frac{2 p^{2} q^{3}}{3 x y}\right)^{0}$ where $p, q, x, y \neq 0$ is equal to

## Question

The value of $\left(\frac{2 p^{2} q^{3}}{3 x y}\right)^{0}$ where $p, q, x, y \neq 0$ is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 0 & \text { (b) } 2 / 3 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

The value of $\left(\frac{2 p^{2} q^{3}}{3 x y}\right)^{0}$ where $p, q, x, y \neq 0$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 0 & \text { (b) } 2 / 3 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

 $\left\{\left(3^{3}\right)^{2} \times\left(4^{2}\right)^{3} \times\left(5^{3}\right)^{2}\right\} /\left\{\left(3^{2}\right)^{3} \times\left(4^{3}\right)^{2} \times(5)\right\}$ is
## Question

$$
\left\{\left(3^{3}\right)^{2} \times\left(4^{2}\right)^{3} \times\left(5^{3}\right)^{2}\right\} /\left\{\left(3^{2}\right)^{3} \times\left(4^{3}\right)^{2} \times(5)\right\} \text { is }
$$

Options
(a) $3 / 4$
(b) $4 / 5$
(c) $4 / 7$
(d) 1

## Question

$$
\left\{\left(3^{3}\right)^{2} \times\left(4^{2}\right)^{3} \times\left(5^{3}\right)^{2}\right\} /\left\{\left(3^{2}\right)^{3} \times\left(4^{3}\right)^{2} \times(5)\right\} \text { is }
$$

## Options

$$
\begin{array}{llll}
\text { (a) } 3 / 4 & \text { (b) } 4 / 5 & \text { (c) } 4 / 7 & \text { (d) } 1
\end{array}
$$

## Question <br> Which is True?

## Question

Which is True?

## Options

$\begin{array}{ll}\text { (a) } 2^{0}>(1 / 2)^{0} & \text { (b) } 2^{0}<(1 / 2)^{0} \quad \text { (c) }\end{array}$
$2^{0}=(1 / 2)^{0} \quad$ (d) none of these

## Question

Which is True?

## Options

$$
\begin{array}{ll}
\begin{array}{ll}
\text { (a) } 2^{0}>(1 / 2)^{0} & \text { (b) } 2^{0}<(1 / 2)^{0} \\
2^{0}=(1 / 2)^{0} & \text { (d) none of these }
\end{array}
\end{array}
$$

## Question

If $x^{1 / p}=y^{1 / q}=z^{1 / r}$ and $x y z=1$, then the value of $p+q+r$ is

## Question

If $x^{1 / p}=y^{1 / q}=z^{1 / r}$ and $x y z=1$, then the value of $p+q+r$ is

## Options

$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 0 & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question

$$
\begin{aligned}
& \text { If } x^{1 / p}=y^{1 / q}=z^{1 / r} \text { and } x y z=1 \text {, then the value of } \\
& p+q+r \text { is }
\end{aligned}
$$

## Options

$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 0 & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question

The value of $y^{a-b} \times y^{b-c} \times y^{c-a} \times y^{-a-b}$ is

## Question

The value of $y^{a-b} \times y^{b-c} \times y^{c-a} \times y^{-a-b}$ is

## Options

(a) $y^{a+b}$
(b) $y$
(c) 1
(d) $1 / y^{a+b}$

## Question

The value of $y^{a-b} \times y^{b-c} \times y^{c-a} \times y^{-a-b}$ is

## Options

(a) $y^{a+b}$
$\begin{array}{ll}\text { (b) } y & \text { (c) } 1\end{array}$
(d) $1 / y^{a+b}$

## Question <br> The True option is

## Question

## The True option is

## Options

$$
x^{2 / 3}>3 \sqrt{ } x^{2}
$$

$$
\begin{aligned}
& \text { (b) } x^{2 / 3}=\sqrt{ } x^{3} \\
& \text { (d) } x^{2 / 3}<3 \sqrt{ } x^{2}
\end{aligned}
$$

## Question

## The True option is

## Options

$$
\begin{array}{ll}
\text { (a) } x^{2 / 3}={ }^{3} x^{2} & \text { (b) } x^{2 / 3}=\sqrt{ } x^{3} \\
x^{2 / 3}>3 \sqrt{ } x^{2} & \text { (c) } x^{2 / 3}<3 \sqrt{ } x^{2}
\end{array}
$$

## Question

The simplified value of $16 x^{-3} y^{2} \times 8^{-1} x^{3} y^{-2}$ is

## Question

The simplified value of $16 x^{-3} y^{2} \times 8^{-1} x^{3} y^{-2}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 x y & \text { (b) } x y / 2 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question

The simplified value of $16 x^{-3} y^{2} \times 8^{-1} x^{3} y^{-2}$ is
Options
$\begin{array}{llll}\text { (a) } 2 x y & \text { (b) } x y / 2 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question

The value of $(8 / 27)^{-1 / 3} \times(32 / 243)^{-1 / 5}$ is

## Question

The value of $(8 / 27)^{-1 / 3} \times(32 / 243)^{-1 / 5}$ is

## Options

(a) $9 / 4$
(b) $4 / 9$
(c) $2 / 3$
(d) none of these

## Question

The value of $(8 / 27)^{-1 / 3} \times(32 / 243)^{-1 / 5}$ is

## Options

$\begin{array}{llll}\text { (a) } 9 / 4 & \text { (b) } 4 / 9 & \text { (c) } 2 / 3 & \text { (d) none of these }\end{array}$

## Question

The value of
$\left\{(x+y)^{2 / 3}(x-y)^{3 / 2} / \sqrt{ } x+y \times \sqrt{ }(x-y)^{3}\right\}^{6}$ is

## Question

The value of
$\left\{(x+y)^{2 / 3}(x-y)^{3 / 2} / \sqrt{ } x+y \times \sqrt{ }(x-y)^{3}\right\}^{6}$ is
Options
$\begin{array}{llll}\text { (a) }(x+y)^{2} & \text { (b) }(x-y) & \text { (c) } x+y & \text { (d) none of }\end{array}$
these

## Question

The value of
$\left\{(x+y)^{2 / 3}(x-y)^{3 / 2} / \sqrt{ } x+y \times \sqrt{ }(x-y)^{3}\right\}^{6}$ is

## Options

$\begin{array}{llll}\text { (a) }(x+y)^{2} & \text { (b) }(x-y) & \text { (c) } x+y & \text { (d) none of }\end{array}$ these

## Question

Simplified value of $(125)^{2 / 3} \times \sqrt{ } 25 \times 3 \sqrt{ } 5^{3} \times 5^{1 / 2}$ is

## Question

Simplified value of $(125)^{2 / 3} \times \sqrt{ } 25 \times 3 \sqrt{ } 5^{3} \times 5^{1 / 2}$ is

## Options

(a) 5 (b) $1 / 5$ (c) 1 (d) none of these

## Question

Simplified value of $(125)^{2 / 3} \times \sqrt{ } 25 \times 3 \sqrt{ } 5^{3} \times 5^{1 / 2}$ is

## Options

$\begin{array}{llll}\text { (a) } 5 & \text { (b) } 1 / 5 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question <br> $\left[\left\{(2)^{1 / 2} \cdot(4)^{3 / 4} \cdot(8)^{5 / 6} \cdot(16)^{7 / 8} \cdot(32)^{9 / 10}\right\}^{4}\right]^{3 / 25}$ is

## Question

$\left[\left\{(2)^{1 / 2} \cdot(4)^{3 / 4} \cdot(8)^{5 / 6} \cdot(16)^{7 / 8} \cdot(32)^{9 / 10}\right\}^{4}\right]^{3 / 25}$ is

## Options

(a) A fraction (b) an integer (c) 1 (d) none of these

## Question

$$
\left[\left\{(2)^{1 / 2} \cdot(4)^{3 / 4} \cdot(8)^{5 / 6} \cdot(16)^{7 / 8} \cdot(32)^{9 / 10}\right\}^{4}\right]^{3 / 25} \text { is }
$$

## Logarithm

The logarithm of a number to a given base is the index or the power to which the base must be raised to produce the number, i.e. to make it equal to the given number. If there are three quantities indicated by say $a, x$ and $n$, they are related as follows:

## Logarithm

The logarithm of a number to a given base is the index or the power to which the base must be raised to produce the number, i.e. to make it equal to the given number. If there are three quantities indicated by say $a, x$ and $n$, they are related as follows: If $a^{X}=n$, where $n>0, a>0$ and $a \neq 1$ then $x$ is said to be the logarithm of the number $n$ to the base 'a' symbolically it can be expressed as follows:

## Logarithm

The logarithm of a number to a given base is the index or the power to which the base must be raised to produce the number, i.e. to make it equal to the given number. If there are three quantities indicated by say $a, x$ and $n$, they are related as follows: If $a^{X}=n$, where $n>0, a>0$ and $a \neq 1$ then $x$ is said to be the logarithm of the number $n$ to the base 'a' symbolically it can be expressed as follows: $\log n=x$ i.e. the logarithm of $n$ to the base ' $a$ ' is $x$.

## Logarithm

The logarithm of a number to a given base is the index or the power to which the base must be raised to produce the number, i.e. to make it equal to the given number. If there are three quantities indicated by say $a, x$ and $n$, they are related as follows: If $a^{X}=n$, where $n>0, a>0$ and $a \neq 1$ then $x$ is said to be the logarithm of the number $n$ to the base 'a' symbolically it can be expressed as follows: $\log n=x$ i.e. the logarithm of $n$ to the base ' $a$ ' is $x$.

## Logarithm

The two equations $a^{X}=n$ and $x=\log _{a} n$ are only transformations of each other and should be remembered to change one form of the relation into the other.
The logarithm of 1 to any base is zero. This is because any number raised to the power zero is one. Since $a^{0}=1, \log 1=0$

## Logarithm

The two equations $a^{X}=n$ and $x=\log _{a} n$ are only transformations of each other and should be remembered to change one form of the relation into the other.
The logarithm of 1 to any base is zero. This is because any number raised to the power zero is one. Since $a^{0}=1, \log 1=0$ The logarithm of any quantity to the same base is unity. This is because any quantity raised to the power 1 is that quantity only. Since $a^{1}=a$, $\log a=1$

## Logarithm

The two equations $a^{X}=n$ and $x=\log _{a} n$ are only transformations of each other and should be remembered to change one form of the relation into the other.
The logarithm of 1 to any base is zero. This is because any number raised to the power zero is one. Since $a^{0}=1, \log 1=0$
The logarithm of any quantity to the same base is unity. This is because any quantity raised to the power 1 is that quantity only. Since $a^{1}=a$, $\log a=1$

## Logarithm

Law 1: Logarithm of the product of two numbers is equal to the sum of the logarithms of the numbers to the same base, i.e.

$$
\log _{a} m n=\log _{a} m+\log _{a} n
$$

## Logarithm

Law 1: Logarithm of the product of two numbers is equal to the sum of the logarithms of the numbers to the same base, i.e.

$$
\log _{a} m n=\log _{a} m+\log _{a} n
$$

Law 2: The logarithm of the quotient of two numbers is equal to the difference of their logarithms to the same base,

## Logarithm

Law 1: Logarithm of the product of two numbers is equal to the sum of the logarithms of the numbers to the same base, i.e.

$$
\log _{a} m n=\log _{a} m+\log _{a} n
$$

Law 2: The logarithm of the quotient of two numbers is equal to the difference of their logarithms to the same base, i.e.

$$
\log _{a} \frac{m}{n}=\log _{a} m-\log _{a} n
$$

## Logarithm

Law 1: Logarithm of the product of two numbers is equal to the sum of the logarithms of the numbers to the same base, i.e.

$$
\log _{a} m n=\log _{a} m+\log _{a} n
$$

Law 2: The logarithm of the quotient of two numbers is equal to the difference of their logarithms to the same base, i.e.

$$
\log _{a} \frac{m}{n}=\log _{a} m-\log _{a} n
$$

## Logarithm

Law 3: Logarithm of the number raised to the power is equal to the index of the power multiplied by the logarithm of the number to the same base

$$
\log _{a} m^{n}=n \log _{a} m
$$

## Logarithm

Law 3: Logarithm of the number raised to the power is equal to the index of the power multiplied by the logarithm of the number to the same base i.e.

$$
\log _{a} m^{n}=n \log _{a} m
$$

Law 4: Change of Base. If the logarithm of a number to any base is given, then the logarithm of the same number to any other base can be determined from the following relation.

## Logarithm

Law 3: Logarithm of the number raised to the power is equal to the index of the power multiplied by the logarithm of the number to the same base i.e.

$$
\log _{a} m^{n}=n \log _{a} m
$$

Law 4: Change of Base. If the logarithm of a number to any base is given, then the logarithm of the same number to any other base can be determined from the following relation.

$$
\log _{a} m=\log _{b} m \log _{a} b=\log _{b} m=\frac{\log _{a} m}{\log _{a} b}
$$

## Logarithm

Law 3: Logarithm of the number raised to the power is equal to the index of the power multiplied by the logarithm of the number to the same base i.e.

$$
\log _{a} m^{n}=n \log _{a} m
$$

Law 4: Change of Base. If the logarithm of a number to any base is given, then the logarithm of the same number to any other base can be determined from the following relation.

$$
\log _{a} m=\log _{b} m \log _{a} b=\log _{b} m=\frac{\log _{a} m}{\log _{a} b}
$$

## Logarithms

If $x$ is the logarithm of a given number $n$ with a given base then $n$ is called the antilogarithm (antilog) of $x$ to that base. This can be expressed as follows: If $\log n=x$ then $n=$ antilog $x$

## Logarithms

If $x$ is the logarithm of a given number $n$ with a given base then $n$ is called the antilogarithm (antilog) of $x$ to that base. This can be expressed as follows: If $\log n=x$ then $n=\operatorname{anti} \log x$

## Logarithms

## Let $x=\log _{a} m$ and $y=\log _{y} n$

 $\therefore a^{x}=m$ and $a^{y}=n$
## Logarithms

Let $x=\log _{a} m$ and $y=\log _{y} n$
$\therefore a^{x}=m$ and $a^{y}=n$
So $a^{x} a^{y}=m n$

## Logarithms

Let $x=\log _{a} m$ and $y=\log _{y} n$
$\therefore a^{x}=m$ and $a^{y}=n$
So $a^{x} a^{y}=m n$

论 $\log _{b} a \times \log _{a} b=1$

## Logarithms

诊 $\log _{a} m n=\log _{a} m+\log _{a} n$
设 $\log _{a}(m / n)=\log _{a} m-\log _{a} n$
设 $\log _{a} m^{n}=n \log _{a} m$
i） $\log _{a} a=1, a=1$
设 $\log 1=0$
设 $\log _{b} a \times \log _{a} b=1$
$\log _{b} a \times \log _{c} b=\log _{a} b$

## Logarithms

诊 $\log _{a} m n=\log _{a} m+\log _{a} n$
设 $\log _{a}(m / n)=\log _{a} m-\log _{a} n$
～ $\log _{a} m^{n}=n \log _{a} m$
i） $\log _{a} a=1, a=1$
设 $\log 1=0$
诊 $\log _{b} a \times \log _{a} b=1$
约 $\log _{b} a \times \log _{c} b=\log _{a} b$

## Logarithms

设 $\log _{b} a=\log a / \log b$
$\log _{b} a=1 / \log _{a} b$

## Logarithms

设 $\log _{b} a=\log a / \log b$
纹 $\log _{b} a=1 / \log _{a} b$
$a^{\log _{a} x}=x$ (Inverse logarithm Property)

## Logarithms

次 $\log _{b} a=\log a / \log b$
设 $\log _{b} a=1 / \log _{a} b$
if $a^{\log _{a} x}=x$ (Inverse logarithm Property)
The two equations $a x=n$ and $x=\log _{a} n$ are only transformations of each other and should be remembered to change one form of the relation into the other. Since $a_{1}=a, \log _{a}^{a}=1$

## Logarithms

设 $\log _{b} a=\log a / \log b$
$\log _{b} a=1 / \log _{a} b$
设 $a^{\log _{\mathrm{a}} x}=x$（Inverse logarithm Property）
设 The two equations $a x=n$ and $x=\log _{a} n$ are only transformations of each other and should be remembered to change one form of the relation into the other．Since $a_{1}=a, \log _{a}^{a}=1$

## Logarithms

## Notes:

\& If base is understood, base is taken as 10 Thus $\log 10=1, \log 1=0$

## Logarithms

## Notes:

i. If base is understood, base is taken as 10 ~ Thus $\log 10=1, \log 1=0$ Logarithm using base 10 is called Common logarithm and logarithm using base $e$ is called Natural logarithm \{e=2.33 (approx.) called exponential number\}.

## Logarithms

## Notes:

\& If base is understood, base is taken as 10
Thus $\log 10=1, \log 1=0$
Logarithm using base 10 is called Common logarithm and logarithm using base $e$ is called Natural logarithm $\{e=2.33$ (approx.) called exponential number\}.

## Question $\log 6+\log 5$ is expressed as

## Question $\log 6+\log 5$ is expressed as

## Options

$\begin{array}{llll}\text { (a) } \log 11 & \text { (b) } \log 30 & \text { (c) } \log 5 / 6 & \text { (d) none of }\end{array}$ these

## Question $\log 6+\log 5$ is expressed as

## Options

$\begin{array}{llll}\text { (a) } \log 11 & \text { (b) } \log 30 & \text { (c) } \log 5 / 6 & \text { (d) none of }\end{array}$ these

## Question <br> $\log _{2} 8$ is equal to

## Question <br> $\log _{2} 8$ is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 2 & \text { (b) } 8 & \text { (c) } 3 & \text { (d) none of these }\end{array}$

## Question

## $\log _{2} 8$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } 8 & \text { (c) } 3 & \text { (d) none of these }\end{array}$

## Question

$\log 32 / 4$ is equal to

## Question

## $\log 32 / 4$ is equal to

## Options

$\begin{array}{lll}\text { (a) } \log 32 / \log 4 & \text { (b) } \log 32-\log 4 & \text { (c) } 2^{3}\end{array}$
(d) none of these

## Question

$\log 32 / 4$ is equal to

## Options

$\begin{array}{lll}\text { (a) } \log 32 / \log 4 & \text { (b) } \log 32-\log 4 & \text { (c) } 2^{3}\end{array}$
(d) none of these

## Question

$\log (1 \times 2 \times 3)$ is equal to

## Question

$\log (1 \times 2 \times 3)$ is equal to

## Options

(a) $\log 1+\log 2+\log 3 \quad$ (b) $\log 3 \quad$ (c) $\log 2$ (d) none of these

## Question

$$
\log (1 \times 2 \times 3) \text { is equal to }
$$

## Options

(a) $\log 1+\log 2+\log 3$
(b) $\log 3$ (c) $\log 2$ (d) none of these

## Question

The value of $\log 0.0001$ to the base 0.1 is

## Question

## The value of $\log 0.0001$ to the base 0.1 is

## Options

(a) $-4 \quad$ (b) $4 \quad$ (c) $1 / 4 \quad$ (d) none of these

## Question

The value of $\log 0.0001$ to the base 0.1 is
Options
$\begin{array}{llll}\text { (a) }-4 & \text { (b) } 4 & \text { (c) } 1 / 4 & \text { (d) none of these }\end{array}$

## Question

## If $2 \log x=4 \log 3$, the $x$ is equal to

## Question

## If $2 \log x=4 \log 3$, the $x$ is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 3 & \text { (b) } 9 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question

## If $2 \log x=4 \log 3$, the $x$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 3 & \text { (b) } 9 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question <br> $\log _{\sqrt{ } 2} 64$ is equal to

## Question

$\log _{\sqrt{ } 2} 64$ is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 12 & \text { (b) } 6 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

$\log _{\sqrt{ } 2} 64$ is equal to
Options
$\begin{array}{llll}\text { (a) } 12 & \text { (b) } 6 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question <br> $\log _{2 \sqrt{3}} 1728$ is equal to

## Question

## $\log _{2 \sqrt{3}} 1728$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 2 \sqrt{3} & \text { (b) } 2 & \text { (c) } 6 & \text { (d) none of these }\end{array}$

## Question

$\log _{2 \sqrt{3}} 1728$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 2 \sqrt{3} & \text { (b) } 2 & \text { (c) } 6 & \text { (d) none of these }\end{array}$

## Question

$\log (1 / 81)$ to the base 9 is equal to

## Question

$\log (1 / 81)$ to the base 9 is equal to

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } 1 / 2 & \text { (c) }-2 & \text { (d) none of these }\end{array}$

## Question

$\log (1 / 81)$ to the base 9 is equal to
Options
$\begin{array}{llll}\text { (a) } 2 & \text { (b) } 1 / 2 & \text { (c) }-2 & \text { (d) none of these }\end{array}$

## Question

$\log 0.0625$ to the base 2 is equal to

## Question

$\log 0.0625$ to the base 2 is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 4 & \text { (b) } 5 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

## $\log 0.0625$ to the base 2 is equal to

## Options

$\begin{array}{llll}\text { (a) } 4 & \text { (b) } 5 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

# Question <br> Given $\log 2=0.3010$ and $\log 3=0.4771$ the value of $\log 6$ is 

## Question

Given $\log 2=0.3010$ and $\log 3=0.4771$ the value of $\log 6$ is

## Options

(a) 0.9030
(b) 0.9542
(c) 0.7781
(d) none of these

## Question

Given $\log 2=0.3010$ and $\log 3=0.4771$ the value of $\log 6$ is

## Options

$\begin{array}{llll}\text { (a) } 0.9030 & \text { (b) } 0.9542 & \text { (c) } 0.7781 & \text { (d) none }\end{array}$ of these

## Question <br> The value of $\log _{2} \log _{2} \log _{2} 16$

## Question

The value of $\log _{2} \log _{2} \log _{2} 16$

## Options <br> $\begin{array}{llll}\text { (a) } 0 & \text { (b) } 2 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

The value of $\log _{2} \log _{2} \log _{2} 16$

## Options

$\begin{array}{llll}\text { (a) } 0 & \text { (b) } 2 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

The value of $\log \frac{1}{3}$ to the base 9 is

## Question

The value of $\log \frac{1}{3}$ to the base 9 is

## Options

(a) $-1 / 2$ (b) $1 / 2$ (c) $1 \quad$ (d) none of these

## Question

The value of $\log \frac{1}{3}$ to the base 9 is

## Options

$\begin{array}{llll}\text { (a) }-1 / 2 & \text { (b) } 1 / 2 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question

If $\log x+\log y=\log (x+y), y$ can be expressed as

## Question

If $\log x+\log y=\log (x+y), y$ can be expressed as

## Options

$\begin{array}{llll}\text { (a) } x-1 & \text { (b) } x & \text { (c) } x / x-1 & \text { (d) none of these }\end{array}$

## Question

If $\log x+\log y=\log (x+y), y$ can be expressed as

## Options

$\begin{array}{llll}\text { (a) } x-1 & \text { (b) } x & \text { (c) } x / x-1 & \text { (d) none of these }\end{array}$

## Question

The value of $\log _{2}\left[\log _{2}\left\{\log _{3}(\log 27)\right\}\right]$ is equal to

## Question

The value of $\log _{2}\left[\log _{2}\left\{\log _{3}(\log 27)\right\}\right]$ is equal to

## Options <br> (a) 1 (b) 2 (c) 0 (d) none of these

## Question

The value of $\log _{2}\left[\log _{2}\left\{\log _{3}(\log 27)\right\}\right]$ is equal to
Options
$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 2 & \text { (c) } 0 & \text { (d) none of these }\end{array}$

## Question <br> If $\log _{2} x+\log _{4} x+\log _{16} x=21 / 4$, these $x$ is equal to

## Question

If $\log _{2} x+\log _{4} x+\log _{16} x=21 / 4$, these $x$ is equal to

## Options <br> $\begin{array}{llll}\text { (a) } 8 & \text { (b) } 4 & \text { (c) } 16 & \text { (d) none of these }\end{array}$

## Question

If $\log _{2} x+\log _{4} x+\log _{16} x=21 / 4$, these $x$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 8 & \text { (b) } 4 & \text { (c) } 16 & \text { (d) none of these }\end{array}$

## Question

Given that $\log _{10} 2=x$ and $\log _{10} 3=y$, the value of $\log _{10} 60$ is expressed as

## Question

Given that $\log _{10} 2=x$ and $\log _{10} 3=y$, the value of $\log _{10} 60$ is expressed as

## Options

$\begin{array}{lll}\text { (a) } x-y+1 & \text { (b) } x+y+1 & \text { (c) } x-y-1\end{array}$
(d) none of these

## Question

Given that $\log _{10} 2=x$ and $\log _{10} 3=y$, the value of $\log _{10} 60$ is expressed as

Options
$\begin{array}{lll}\text { (a) } x-y+1 & \text { (b) } x+y+1 & \text { (c) } x-y-1\end{array}$
(d) none of these

## Question

Given that $\log _{10} 2=x, \log _{10} 3=y$, then $\log _{10} 1.2$ is expressed in terms of $x$ and $y$ as

## Question

Given that $\log _{10} 2=x, \log _{10} 3=y$, then $\log _{10} 1.2$ is expressed in terms of $x$ and $y$ as

## Options

$\begin{array}{lll}\text { (a) } x+2 y-1 & \text { (b) } x+y-1 & \text { (c) } 2 x+y-1\end{array}$
(d) none of these

## Question

Given that $\log _{10} 2=x, \log _{10} 3=y$, then $\log _{10} 1.2$ is expressed in terms of $x$ and $y$ as

Options
(a) $x+2 y-1$
$\begin{array}{ll}\text { (b) } x+y-1 & \text { (c) } 2 x+y-1\end{array}$
(d) none of these

## Question

Given that $\log x=m+n$ and $\log y=m-n$, the value of $\log 10 x / y^{2}$ is expressed in terms of $m$ and $n$ as

## Question

Given that $\log x=m+n$ and $\log y=m-n$, the value of $\log 10 x / y^{2}$ is expressed in terms of $m$ and $n$ as

## Options

$\begin{array}{ll}\text { (a) } 1-m+3 n & \text { (b) } m-1+3 n \\ \text { (c) }\end{array}$ $m+3 n+1 \quad$ (d) none of these

## Question

Given that $\log x=m+n$ and $\log y=m-n$, the value of $\log 10 x / y^{2}$ is expressed in terms of $m$ and $n$ as

## Options

$\begin{array}{ll}\text { (a) } 1-m+3 n & \text { (b) } m-1+3 n \\ \text { (c) }\end{array}$ $m+3 n+1 \quad$ (d) none of these

## Question

The simplified value of
$2 \log _{10} 5+\log _{10} 8-1 / 2 \log _{10} 4$ is

## Question

The simplified value of
$2 \log _{10} 5+\log _{10} 8-1 / 2 \log _{10} 4$ is

## Options

$\begin{array}{llll}\text { (a) } 1 / 2 & \text { (b) } 4 & \text { (c) } 2 & \text { (d) none of these }\end{array}$

## Question

The simplified value of
$2 \log _{10} 5+\log _{10} 8-1 / 2 \log _{10} 4$ is
Options
(a) $1 / 2$
(b) $4 \quad$ (c) 2
(d) none of these

## Question

$$
\log \left[1-\left\{1-\left(1-x^{2}\right)^{-1}\right\}^{-1}\right]^{-1 / 2} \text { can be written as }
$$

## Question

$\log \left[1-\left\{1-\left(1-x^{2}\right)^{-1}\right\}^{-1}\right]^{-1 / 2}$ can be written as

## Options

$\begin{array}{llll}\text { (a) } \log x^{2} & \text { (b) } \log x & \text { (c) } \log 1 / x & \text { (d) none of }\end{array}$ these

## Question

$$
\log \left[1-\left\{1-\left(1-x^{2}\right)^{-1}\right\}^{-1}\right]^{-1 / 2} \text { can be written as }
$$

## Options

## $\begin{array}{llll}\text { (a) } \log x^{2} & \text { (b) } \log x & \text { (c) } \log 1 / x & \text { (d) none of }\end{array}$

 these
## Question

The simplified value of $\log \sqrt[4]{729 \sqrt[3]{9^{1} 27^{4 / 3}}}$ is

## Question

The simplified value of $\log \sqrt[4]{729 \sqrt[3]{9^{1} 27^{4 / 3}}}$ is

## Options

$\begin{array}{llll}\text { (a) } \log 3 & \text { (b) } \log 2 & \text { (c) } \log ^{1 / 2} & \text { (d) none of }\end{array}$
these

## Question

The simplified value of $\log \sqrt[4]{729 \sqrt[3]{99^{1} 27^{4 / 3}}}$ is

## Options

$\begin{array}{llll}\text { (a) } \log 3 & \text { (b) } \log 2 & \text { (c) } \log ^{1 / 2} & \text { (d) none of }\end{array}$ these

## Question

The value of $\left(\log _{b} a \times \log _{c} b \times \log _{a} c\right)^{3}$ is equal to

## Question

The value of $\left(\log _{b} a \times \log _{c} b \times \log _{a} c\right)^{3}$ is equal to

## Options

(a) 3 (b) $0 \quad$ (c) $1 \quad$ (d) none of these

## Question

The value of $\left(\log _{b} a \times \log _{c} b \times \log _{a} c\right)^{3}$ is equal to

## Options

$\begin{array}{llll}\text { (a) } 3 & \text { (b) } 0 & \text { (c) } 1 & \text { (d) none of these }\end{array}$

## Question <br> The logarithm of 64 to the base $2 \sqrt{2}$ is

## Question

The logarithm of 64 to the base $2 \sqrt{2}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } \sqrt{2} & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question

The logarithm of 64 to the base $2 \sqrt{2}$ is

## Options

$\begin{array}{llll}\text { (a) } 2 & \text { (b) } \sqrt{2} & \text { (c) } 1 / 2 & \text { (d) none of these }\end{array}$

## Question <br> The value of $\log _{8} 25$ given $\log 2=0.3010$ is

## Question

The value of $\log _{8} 25$ given $\log 2=0.3010$ is

## Options

$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 2 & \text { (c) } 1.5482 & \text { (d) none of these }\end{array}$

## Question

The value of $\log _{8} 25$ given $\log 2=0.3010$ is
Options
$\begin{array}{llll}\text { (a) } 1 & \text { (b) } 2 & \text { (c) } 1.5482 & \text { (d) none of these }\end{array}$

## Thank you
